The Dental Clinic Management System strives to optimize the clinical and the administrative tasks in a dental practice. It is customized to meet the specific needs of different stakeholders within the dental clinic, which allows efficient management. Different associates have various accessibility levels to the system, allowing for different responsibilities and permissions based on their role within the clinic.

1.The dentist can access patient information.
2.The dentist can edit every information related to the dental procedures done in the clinic.
3.The receptionist can fix appointments.
4.The receptionist can save personal information and dental treatment history for each patient.
5.The accountant generates payment fees.

6.The client can schedule appointments.
7.The client can view all the available services they can receive.
8. The financial officer keeps track of inventory items.
9. HR workers can manage employee information, which can be active or inactive.
